ABOUT

Creative fullstack developer with hands-on experience in web and mobile applications, internal systems and 3D. Well-versed in the medical industry – from dedicated web applications (advanced content editors, print and PDF export, API integrations, a design system), document and scan processing pipelines and improvements to existing systems, to national and international congresses and conferences, for which I delivered applications (VOD, virtual booths, mobile apps) and provided on-site IT support, also on business trips. Shipped an NFT auction system and a dApp tied to a 3D MOBA game built in Unity. From vanilla JS through frontend and backend frameworks and relational and non-relational databases to Docker – comfortable across the full stack, including AI/LLM model integration. Particularly drawn to creative frontend work and WebGL. Personally passionate about modding and creating useful, unconventional solutions.

SKILLS AND TOOLS

TypeScript, React, Next.js, React Native, Redux, MobX, TailwindCSS, Sass, GSAP, TanStack, Mantine, Vite, Three.js, HTML5, CSS3, Python, Node.js, Java, Kotlin, Jetpack Compose, Vitest, JavaScript, Jest, GitHub Actions, SQL, REST API, Storybook, PHP, Laravel, Wordpress, Sanity, PostgreSQL, MySQL, MongoDB, Firebase, Docker, Photoshop, 3Ds Max, Blender, Figma, Canva, GitHub, npm, CursorAI, Claude

METHODS AND PRACTICES

Agile / Scrum, CI/CD (GitHub Actions), Git, Unit testing (Jest, Vitest, pytest), Technical and handover documentation, AI/LLM model integration

EXPERIENCE

Fullstack Developer, 2SIMPLE
Sep 2025 – present | Remote
React, TypeScript, MobX, TanStack, Mantine, Vitest, Storybook, Agile/Scrum, CI/CD, Python, PostgreSQL, Docker, Git

- Designed and built web applications: advanced content editors and custom solutions with print and PDF export, plus full touch support on mobile devices
- Integrated applications with external systems and APIs, including user authorization; extracted shared libraries and reusable components that tolerate network failures
- Created a design system and documentation for components shared across applications
- Engineered tools and pipelines for processing digital documents and scans; authored technical documentation

Front-End Developer, BUSINESS SERVICE GALOP
May 2024 – Aug 2025 | Hybrid
PHP, MySQL, Laravel, React Native, Vanilla JS, TypeScript, Next.js, TailwindCSS, Git

- Updated and expanded the internal event management system with new features, optimizations and bug fixes; designed a new participant zone embedded in the event websites; created a dedicated system instance tailored to the needs of a major client, supporting diverse medical courses and events
- Delivered a management system for the Endoscopy Section, a VOD platform for purchasing and watching recorded conference content, dedicated front-end solutions for medical events (customized registration forms and websites, participant zones, API integrations) and responsive mailings compatible with all major email clients
- Shipped a mobile application for Zebra data collectors and a web application for attendance tracking during event sessions, covering both self-scanning kiosks and Zebra scanners
- Created a customizable live voting application with an administrative panel and real-time results; launched virtual exhibitor booths with documentation for partner companies
- Provided on-site IT support during events across Poland, ensuring smooth operation of software systems and hardware reliability; assisted event participants when needed, including at international conferences

Junior Web3 Frontend Developer, ANFATA GAMES
Sep 2022 – Aug 2023 | Hybrid
Next.js, TypeScript, GSAP, Sanity CMS, Moralis, Firebase, Web3, TailwindCSS, Git

- Engineered a decentralized app built on smart contracts and ImmutableX collections: a marketplace, NFT bridging between L1 and L2, wallet-to-wallet transfers and a live blockchain auction system
- Handled Moralis and Firebase databases and cloud functions in TypeScript and Next.js, with GSAP for motion; GitLab and Bitbucket for version control
- Launched a new homepage, added a Sanity CMS blog and produced custom event websites and features across the company's platforms
- Tested Pirates of the Arrland manually, including the 3D MOBA game and the 2D strategy map
- Collaborated closely with a cross-functional, international team on Web3 experiences

EDUCATION

University of Silesia – Faculty of Science and Technology
Web Application Programming, Bachelor of Engineering (inż.), October 2017 – June 2021

LANGUAGES

Polish – native, English – C1, Russian – A2

SELECTED PROJECTS

POLONEZ AUTODRIVE

JavaScript, Three.js, 3D Studio Max
An 80s/synthwave-style 3D animation in the form of a coloring book, with real-time customization of colors and models in the scene via a built-in GUI. The Polonez and palm tree models were made in 3D Studio Max, the rest of the scene is generated procedurally. Includes an arcade mini-game.
https://github.com/SkorczanFFF/Polonez-Autodrive | https://www.polonez-autodrive.skoftware.pl/

Yet Another Weather App

React, React Three Fiber/Three.js, TypeScript, Sass, Open-Meteo API
Weather apps are a dime a dozen, but this one is built differently. The background is a 3D scene with volumetric clouds that simulates the weather in real time from Open-Meteo data. The forecast is shown for a city selected via map, geolocation or entered city name.
https://github.com/SkorczanFFF/YetAnotherWeatherApp/ | https://www.yet-another-weather-app.skoftware.pl/

VAT-OFF

JavaScript, Chrome Extension API, CSS
See prices excluding VAT when you hover over them on any website. Automatically detects prices and displays the net amount in a tooltip on hover. Supports 120+ countries with preconfigured currencies and VAT rates, and allows custom VAT rate and currency. Features a built-in VAT calculator (GROSS/NET). Available on the Chrome Web Store.
https://github.com/SkorczanFFF/VAT-OFF | https://chromewebstore.google.com/detail/vat-off/lplomppbbkgehcldiilhckbdalnblhdl

Pokédex

React, TypeScript, Vite, TailwindCSS, TanStack Query, i18next, PokéAPI
A Pokédex on PokéAPI in Polish and English, with a modern and a retro (Gen II) era. Versus calculates damage and hits to knock out, the type effectiveness chart tracks changes between generations; plus evolutions, cries, sprites from every game version and entries read aloud.
https://github.com/SkorczanFFF/pokedex | https://www.pokedex.skoftware.pl/

SKOFTWARE - my portfolio

Next.js, TypeScript, TailwindCSS, React Three Fiber/Three.js, GSAP, i18n
My portfolio website — a playground for web experiments. Features a 3D scene built in React Three Fiber, transitions and animations in GSAP, and i18n for multilingual support. Also includes a built-in web version of my resume in Polish and English. A project in constant evolution, probably never leaving "WIP" status.

Tibia Key Presser

Python, Tkinter, pywinauto
A lightweight Python automation tool for Tibia (MMORPG), supporting up to eight configurable key-delay pairs. Auto-detects the game window, runs silently in the background without interrupting other activities or games.
https://github.com/SkorczanFFF/tibia-key-presser

HOBBIES

bass guitar, cars, music, traveling, technology, pottery
